

10 to 25% by weight component (B): ethylene/octene and/or ethylene/butene random copolymer, containing the comonomers at 28% by weight or more for the copolymerization and having an MFR of 0.5 to 20 g/10min.;

4 to 9% by weight component (C): styrene-based hydrogenated block copolymer rubber having the structure A-B or A-B-A wherein the segment A is a polystyrene structure and segment B is an ethylene/butene or ethylene/propylene structure, containing the segment A of polystyrene structure at 1 to 25% by weight; and

16 to 24% by weight component (D): talc, having an average particle size of 10 mm or less, determined by the laser-aided diffractometry.
